

How To: Enter Yearling Data

Entering yearling data for your herd on the American Gelbvieh Association Registry Service is easy to do by following a few simple steps and is a process similar to entering weaning data.

General Profile Information [edit]

Profile Type: Active Member

To enter yearling data, use the Yearling boxes under the Herd tab to put animals into the Yearling Work Queue.

Accessing the member login

The member login can be accessed from the Gelbvieh home page by clicking on the banner that says AGA Registry Service Login.

- Go to www.Gelbvieh.org using any Internet browser.
- Click on AGA Registry Service Login in the upper right hand corner of the Gelbvieh home page.
- Do not use the Login and Register links on the Gelbvieh home page. This login is for AGA's Exchange Listing Service and can be used to post bulls, females and feeder cattle for sale. To access the AGA Registry Service member login, you must click on the AGA Registry Service Login button.
- The member login is located in the upper left hand

side of the Registry Service screen. Enter your User name and Password.

Adding animals to yearling work queue

The first step to enter yearling information is to put the animals in the Yearling Work Queue. First check if you have any animals already in the Yearling Work Queue. You may have added animals into the yearling work queue if you clicked "Add to yearling queue" after you entered weaning data. If there is no work in the yearling queue, you will need to add animals to the Yearling Work Queue.

- Using the Work Menu navigation on the left hand side of the screen, click on View under My Account. Under the General Profile Information screen, click on the Herd tab.

Yearling Queue

| Member ID | Member Name | Total | Work Order | WO Date | Origin | WO Age |

Validate Commit

Error Descriptors:

- Registration # cannot be located. Please verify that the registration number is complete and correct.
- Animal already has a yearling record. Updates for these animals are not possible thru this screen.
- No weaning record on file.
- Changes the animal from a male-to-female or female-to-male.
- Critical Out-of-Range (prevents records from being committed to registry):**
 - Date: The date cannot be AFTER today.
 - Date: The date must be after the calf was weaned.
 - Date: The date cannot be greater than 545 days from birth.
 - Weight: Valid measurements are between WW+30 and 2200.
 - Hip Height: Valid measurements are between 35 and 60.
 - Scrotal Circumference: Valid measurements are between 20 and 50.
- Advisory Out-of-Range:**
 - Date: Valid yearling range is from 320 days to 410 days.
 - Weight: Valid measurements are between WW+30 and 1500.
 - Hip Height: Valid measurements are between 40 and 55.
 - Scrotal Circumference: Valid measurements are between 20 and 42.

Yearling data entry screen. Complete as much data as available, and then hit the Validate button. The validation process checks the data for errors. Correct the errors and hit the Validate button again. Next, click the Commit button, this commits the data to the registry. You must click both Validate and then Commit in order for the data to be processed.

- In the series of boxes running across the middle of the screen. Identify the Bulls:: Yearling box and the Females:: Yearling box. Clicking on either of these boxes will bring up a listing of all bulls or females in your inventory that are between 250 and 720 days of age and do not have a breeding record.
- In the Year column, click on the Year box next to each calf you want to enter yearling data for, which puts that animal in the Yearling Work Queue. Do this for all the bulls and females you want to enter yearling data for. If the animal does not have a box in the Year column it means this animal is less than 250 days of age.

Entering yearling data

- Navigate to the Yearling Work Queue. The Yearling Queue shows there is work waiting to be processed; click on the desired row to open that work order.
- In the yearling data entry screen, enter available information: yearling date, weight, temperament score, hip height, scrotal measurement, pelvic width and height, management code, feed resources, and status. Clicking on any of the column headers will bring up a dialog box with a description of what needs to be entered into that column.
- If there is an animal in the work queue that you do not have data for, delete that animal from the work queue by clicking on the red X at the right-most column of the screen. That animal is removed and yearling data can be entered later.

Validate and commit

- Once all data is entered, click the Validate button located below the last calf data line. You must click Validate before leaving this screen, otherwise all the data entered will be lost.
- The validation process checks the data entered for any errors. If there are no errors that show up, click the Commit button. This commits the data to the registry. This is a two-step process – first you Validate the data to check for errors, then you Commit the data to the registry.
- If there are any errors, an error descriptor will be displayed on the left of the screen in the animal row where there is an error, representing the type of error that is explained at the bottom of the screen. The field that contains the error will also be highlighted in either yellow or red.
 - If the box is highlighted yellow, this means it is an advisory error and may be out of the normal range but may still be committed to the Registry.
 - If the error is highlighted red, this means the error is critical and cannot be committed to the Registry Service at this time.
- Correct as many errors as possible, and then click Validate again.
- Click the Commit button. Any animal that still has an error will remain in the kickout queue to be fixed at a later time. The kickouts can be found on the General Profile Information screen by clicking on View under the My Account menu, and then clicking on the Kickouts tab. Clicking on the work order number will bring up the animals with errors. Contact the AGA registration department for help in correcting remaining errors.
